

From Bricks to Bytes, Instruction During a Pandemic

Michael Stein – Technology Integration Coach, Berks Career and Technology Center

COVID-19's impact on how instruction in CTE can be delivered has created an opportunity for instructional innovation. By focusing digital tools to provide continued instruction, instructors are enabled to provide communication, lesson delivery, instructional support, and assessment in an uncertain learning environment. Attendees will learn how our instructors and instructional coaches reacted and responded to these changes to support students in a virtual environment.
